

CCS020M12CM2

1.2kV, 80 mΩ Silicon Carbide Six-Pack (Three Phase) Module

C2M MOSFET and Z-Rec™ Diode

V_{DS}	1.2 kV
$E_{sw, Total} @ 20A, 150 °C$	0.48 mJ
$R_{DS(on)}$	80 mΩ

Features

- Ultra Low Loss
- High-Frequency Operation
- Zero Reverse Recovery Current from Diode
- Zero Turn-off Tail Current from MOSFET
- Normally-off, Fail-safe Device Operation
- Ease of Paralleling
- Copper Baseplate and Aluminum Nitride Insulator

System Benefits

- Enables Compact and Lightweight Systems
- High Efficiency Operation
- Mitigates Over-voltage Protection
- Reduced Thermal Requirements
- Reduced System Cost

Applications

- Solar Inverter
- 3-Phase PFC
- Regen Drive
- UPS and SMPS
- Motor Drive

Package

Part Number	Package	Marking
CCS020M12CM2	Six-Pack	CCS020M12CM2

Maximum Ratings ($T_C = 25 °C$ unless otherwise specified)

Symbol	Parameter	Value	Unit	Test Conditions	Notes
V_{DSmax}	Drain - Source Voltage	1.2	kV		
V_{GSmax}	Gate - Source Voltage	-10/+25	V	Absolute maximum values	
V_{GSop}	Gate - Source Voltage	-5/20	V	Recommended operational values	
I_D	Continuous MOSFET Drain Current	29.5	A	$V_{GS} = 20 V, T_C = 25 °C$	Fig. 25
		20		$V_{GS} = 20 V, T_C = 90 °C$	
$I_{D(pulse)}$	Pulsed Drain Current	80	A	Pulse width t_p limited by $T_{J(max)}$	
I_F	Continuous Diode Forward Current	46	A	$V_{GS} = -5 V, T_C = 25 °C$	
		27		$V_{GS} = -5 V, T_C = 90 °C$	
T_{Jmax}	Junction Temperature	-40 to +150	°C		
T_C, T_{STG}	Case and Storage Temperature Range	-40 to +125	°C		
V_{isol}	Case Isolation Voltage	5.0	kV	AC, 50 Hz, 1 min	
L_{Stray}	Stray Inductance	30	nH	Measured between terminals 25, 26 and 27, 28	
P_D	Power Dissipation	167	W	$T_C = 25 °C, T_J = 150 °C$	Fig. 26

Electrical Characteristics ($T_c = 25^\circ\text{C}$ unless otherwise specified)

Creepage and Clearance Data

Distance	Creepage	Clearance
Minimum Distance Between Two High Voltage Pins	11.9 mm	6.5 mm
Distance Between High Voltage Pin and Isolated Baseplate	15.6 mm	15.6 mm
Distance Between High Voltage Pin and Mounting Bolt's Head	19.1 mm	8.6 mm
Distance Between High Voltage Pin and Isolated NTC Pin	16.7 mm	11.8 mm

Package Dimensions (mm)

* = all dimensions with tolerance of ± 0.4

Recommendations for PCB mounting stand-offs

In order to mount the PCB onto the module, it is recommended to use four PCB mounting stand-offs by using self-tapping screws. Following is the recommended self-tapping screw with its torque requirements:

> Ejot DELTA PT WN 5451 K25x8 : $M_{\max} = 0.4\text{Nm} \pm 10\%$

Installation of self-tapping screws can be done both by hand or by using an electric screw driver. For an electric screw driver the recommended maximum speed is 300 RPM.

(Note: Do not use pneumatic screw driver to install self-tapping screws).

The recommended effective length of screw threads entering the PCB mounting stand-offs should be in between 4mm to 6.5mm range.

(Note: Self-tapping screws must be inserted straight into the PCB mounting stand-offs)

PCB mounting stand-offs (Marked Red)

Notes

- **RoHS Compliance**

The levels of RoHS restricted materials in this product are below the maximum concentration values (also referred to as the threshold limits) permitted for such substances, or are used in an exempted application, in accordance with EU Directive 2011/65/EC (RoHS2), as implemented January 2, 2013. RoHS Declarations for this product can be obtained from your Cree representative or from the Product Documentation sections of www.cree.com.

- **REACH Compliance**

REACH substances of high concern (SVHCs) information is available for this product. Since the European Chemical Agency (ECHA) has published notice of their intent to frequently revise the SVHC listing for the foreseeable future, please contact a Cree representative to insure you get the most up-to-date REACH SVHC Declaration. REACH banned substance information (REACH Article 67) is also available upon request.

- This product has not been designed or tested for use in, and is not intended for use in, applications implanted into the human body nor in applications in which failure of the product could lead to death, personal injury or property damage, including but not limited to equipment used in the operation of nuclear facilities, life-support machines, cardiac defibrillators or similar emergency medical equipment, aircraft navigation or communication or control systems, air traffic control systems.

Module Application Note:

The SiC MOSFET module switches at speeds beyond what is customarily associated with IGBT based modules. Therefore, special precautions are required to realize the best performance. The interconnection between the gate driver and module housing needs to be as short as possible. This will afford the best switching time and avoid the potential for device oscillation. Also, great care is required to insure minimum inductance between the module and link capacitors to avoid excessive V_{DS} overshoots.

Please Refer to application note: Design Considerations when using Cree SiC Modules Part 1 and Part 2. [CPWR-AN12, CPWR-AN13]
